DETAILED ACTION

- **Claims 1, 2, 4, 6, 7, and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Thoren, U.S. Patent Application Publication Number 2006/0053218.**

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 4, 6, 7, and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Thoren, U.S. Patent Application Publication Number 2006/0053218.

3. Regarding claim 1:

- a. Regarding the limitation of “detecting a group of said parameter write messages that occur closer together than operator initiated parameter write messages,” Thoren discloses a system wherein data transfer over a field bus, such as a Fieldbus, (Paragraph 0006), can have a limited data transfer rates. The system as problems receive mass amount of data being sent from a computer system to the field device. (Paragraphs 0016-0018).

- b. Regarding the limitation of “suppressing a communication of errors arising from said group of parameter write messages or a rejection of a parameter write operation, wherein said rejection results from any of said errors arising from said group of parameter write messages,” Thoren discloses a system wherein error thresholds are

suppressed by data transfer manipulation for specific time spans of data transfers.

(Paragraph 0018).

4. Regarding claim 2, Thoren discloses a system wherein if a data transfer is not completed within a specific time span, due to large amounts of data being transferred to the field device, the steps are repeated until all the data is transferred and is consistent with the device specification. (Lines 0035).

5. Regarding claim 4, Thoren disclose a system in which the data received on the field device is checked to make sure it is up to the specification of the system and an error will occur if the data does not meet the requirements. (Paragraph 0035).

6. Regarding claim 6:

c. Regarding the limitation of "detecting a group of said parameter write messages that occur closer together than operator initiated parameter write messages," Thoren discloses a system wherein data transfer over a field bus, such as a Fieldbus, (Paragraph 0006), can have a limited data transfer rates. The system as problems receive mass amount of data being sent from a computer system to the field device. (Paragraphs 0016-0018).

d. Regarding the limitation of "suppressing a communication of errors arising from said group of parameter write messages or a rejection of a parameter write operation, wherein said rejection results from any of said errors arising from said group of parameter write messages," Thoren discloses a system wherein error thresholds are suppressed by data transfer manipulation for specific time spans of data transfers. (Paragraph 0018).

7. Regarding claim 7, Thoren discloses a system wherein if a data transfer is not completed within a specific time span, due to large amounts of data being transferred to the field

device, the steps are repeated until all the data is transferred and is consistent with the device specification. (Lines 0035).

8. Regarding claim 9, Thoren disclose a system in which the data received on the field device is checked to make sure it is up to the specification of the system and an error will occur if the data does not meet the requirements. (Paragraph 0035).

Allowable Subject Matter

9. Claims 3, 5, 8, and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
